

THE ONBOARD BASIC SAFETY TRAINING PROGRAM

THE INTERACTIVE TRAINING, DRILLING & ASSESSMENT CD

An instructional resource that combines broadcast quality videotapes, pictorial workbooks and computer-based training now provides vessel operators with a cost-effective means of complying with the drilling, training and assessment requirements established by the International Safety Management (ISM) and Standards of Training, Certification & Watchkeeping (STCW) codes. The audio-visual training courses consist of a library of 14 videocassettes and four workbooks covering the requirements established by Table VI of the STCW Code. Photographed aboard vessels ranging from sea-going tugs and fishing vessels to oil tankers and container ships, each module incorporates dramatic emergency scenarios and clearly illustrated response procedures.

Crewmembers log onto the BST JV Test component of the software for assessment and certification of their competency in the four BST subject areas. Each test consists of 20 questions generated in random order to minimize test fraud. Each question includes a memory-enhancing video clip intended to boost content retention and enhance test performance. The software scores and certifies each test. Vessel managers log onto the secure Training & Drilling Administrator or Test Administrator components of the software to log training and drilling events, maintain crewmember records, review crewmember test performance and generate real time reports in response to audits by in-house or external authorities.

Audio Visual Training Modules

- Basic Fire Fighting
- Personal Survival
- Onboard First Aid: Immediate Actions
- Personal Safety & Social Responsibility

Components of the Software

- BST JV Test
- Test Administrator
- Training & Drilling Administrator
- Certificates & Reports

THE COST-EFFECTIVE SOLUTION TO STCW/ISM RENEWAL TRAINING REQUIREMENTS
